

BATS IN CHURCHES

St Name FIELD DALLING Norfolk

The Issue

Field Dalling has a roost of around 50 Common Pipistrelles, with small numbers of Soprano Pipistrelles as well. The church already had a mitigation plan and had constructed a new rafter bat box in the south east corner of the nave.

What We Did

We have funded a new small camera for the church's existing rafter box in order to help monitor how this is being used, and potentially help the church look at permanently excluding their bats.

We have also bought new, matching oilcloth covers for the church to use on pews, alter, organ stools and display tables to replace the previous blue plastic covers. We have also bought the church some small items to help them run events and community activities in the church
