

BATS IN CHURCHES

St Andrew HOPE BOWDLER Shropshire

The Issue

St Andrew's is home to Brown Long-eared Bats and Pipistrelles which roost in the nave and chancel. From May to September there are droppings scattered in the nave and chancel.

What We Did

The project funded cloth covers to replace the unsightly plastic sheets.

In May 2022 children from a local school visited to learn about the history and heritage of the church, why bats like to roost in churches, the problems this can sometimes cause, and what the project is doing to help.
