

BATS IN CHURCHES

St Peter MUNDHAM Norfolk

The Issue

The initial light touch survey showed a large number of mainly Natterer's droppings scattered throughout the church, along with some signs of Common and Soprano Pipistrelles. The bats caused significant impact on such a small church. Everything is covered with plastic or dusts sheets, especially the brasses.

What We Did

Unfortunately this church has little capacity for running events or major fundraising.

We have met with the PCC and talked through all the potential options for bat mitigation at the church. We've also provided them with a range of new interpretation about their bats and information on next steps.

We are writing a full statement of significance for the church which they can use to help apply for future funding.
