

BATS IN CHURCHES

St Michael and All Angels NORTH PIDDL Worcestershire

The Issue

Brown Long-eared Bats roost inside the church in the nave and porch. There is urine spotting on most pews, particularly in the central areas of the nave.

*Daniel Hargreaves

What We Did

The church was keen on exploring whether the bats could be moved into the vestry roof void where they would be less of a nuisance. The local bat group was happy to run bat walks and put up bat boxes in the churchyard.

Unfortunately St Michael's has not reopened since the first Covid19 lockdown in 2020 and we have therefore been unable to do any work with this church.
