

BATS IN CHURCHES

St Mary the Virgin OLD HUNSTANTON Norfolk

The Issue

Old Hunstanton is mainly home to a small roost of Common and Soprano Pipistrelle, with some signs of Brown Long-eared and Serotine bats. The church is usually able to manage the cleaning but were concerned that bats might affect a planned reordering

What We Did

We have given the church guidance and advice on where to find help once the planned reordering is under way.

We have also purchased a new set of display boards for the church so they can share more information to visitors. We have also provided new interpretation about the bats using the church.

The project has written a new statement of significance for the church, highlighting areas of bat damage.
