

BATS IN CHURCHES

Our Lady St Mary SOUTH CREAKE Norfolk

The Issue

Our Lady St Mary is a very active church with an unusual painted angel roof. Our surveys showed signs of both Natterer's and Common Pipistrelle, although numbers of bats in the church had declined quite significantly in recent years.

What We Did

Several members of the PCC attended one of our local cleaning workshops and received advice and help on cleaning with bats, as well as receiving a full cleaning kit, a new hoover and new pew covers.

We are writing a statement of significance to help the church when it applies for future funding and have send them a range of interpretation, information and posters to help them tell visitors more about their bats.
