

BATS IN CHURCHES

St Michael and All Angels WENTNOR Shropshire

The Issue

There are accumulations of droppings at the west end of the nave near the font, indicating a possible maternity roost of Brown Long-eared Bats in the nave roof apex. Common Pipistrelles have also been recorded flying inside the church.

*Daniel Hargreaves

What We Did

The bats are not causing the church any issues, and the church cleaners are able to keep on top of the cleaning.

In September 2022 the church held its first ever bat walk, led by expert volunteers from the local bat group.
